

Sprint Retrospective

Team Name: Irregular Innovations

Team Members: Hassan Al Lawati, Chris Maude, Jason Morales, Hoanh Nguyen, Faizan Zafar

What went well:

1. We got more work done than expected
2. We were more organized than last spring
3. We have some tangible results
4. We managed to balance the administrative work with the concrete code work fairly well

What didn't go well:

1. Our sprint was not started and put together soon enough, causing our burndown to have a large jump at the beginning
 - a. Plan our sprint goals earlier and put them into a sprint preemptively
2. We had many large tasks, and not many small tasks, so our burndown wasn't very smooth
 - a. Cut tasks up into smaller pieces
3. Our code contributions ended up being largely skewed due to the nature of how tasks were distributed
 - a. I'm not sure there's a good solution to this other than to try and balance code contributions better, but that's not always an option as some tasks require many small files, and others do not.
